

STENA LINE'S NEW SUPERFERRIES

During end of August 2010 the world's largest passenger and Ro/Pax ferries will be taken into service on the route Gothenburg-Kiel. The new, top modern, Stena Germanica and Stena Scandinavica, are 240 meter long and have a total load capacity of about 4 100 meters. The first ferry will be taken into service in late August and the second ferry in the beginning of 2011.

The route Gothenburg-Kiel will be merged with Gothenburg-Travemünde, as two vessels will replace the four ferries that currently travel between Gothenburg and Germany.

Environmental gains

The merged route between Gothenburg and Germany will lead to significant reduction of CO2 emissions and noise reduction in the harbour.
