

SWEDEN'S BEST LOGISTICS LOCATION - AGAIN

The industry magazine "Intelligent Logistik" each year produces a list of the best logistics locations in Sweden and for the ninth year in succession the Gothenburg region has topped the list.

Apart from a very good transport infrastructure, cutting-edge education in logistics and strong regional collaboration, the Port of Gothenburg is stated to be a strong and highly significant factor in the region. The Port, which is the largest in Scandinavia, offering direct, ocean-going lines, a wide range of services and a well-developed system of rail shuttles, is of significant benefit to Swedish industry.

Sweden is also doing well by international standards. When the World Bank earlier this year presented its Logistics Performance Index 2010, Sweden was in third place. Sweden's has thus moved up a place since the index was first published in 2007.
